SUMMARY

Experienced **Ph.D.** Computational Physicist skilled in mathematical **modeling** and adept in applying **AI/ML**, seeking a role to tackle complex challenges and drive impactful solutions.

SKILLS

Languages: Python, Julia, R, C/C++, SQL, Bash, HTML.
Tools: Machine Learning, Data Handling, Data Analysis, Data Visualization
Technologies: Linux, Mac OS, Windows.

EDUCATION

08/2019 - present	**Ph.D Stochastic Modeling for Material Design** GPA: 4/4	**University of Central Florida**
10/2017 - 07/2019	**M.S. Nuclear Engineering** Grade: 9.2/10, Valedictorian	**National and Kapodistrian University of Athens**
10/2011 - 07/2017	**B.S. Physics** Highly focused in Computational Physics	**National and Kapodistrian University of Athens**

INDUSTRY EXPERIENCE

5/2024 – present   **Modeling Product Engineer Intern**   **ASML, Silicon Valley, CA**

- Designed **computational lithography** simulations for geometrical corner rounding optimization in the Tachyon software, reducing the simulation run time, without loosing accuracy . This improvement was adopted in the latest Tachyon release and proposed to several customers.
- Developed **Rigorous M3D** simulations to optimize the **Transition Cross Coefficient (TCC)** number in Tachyon software, achieving a reduction in simulation run time. This enhancement was introduced to one of our customers.
- Participated in discussions regarding the tachyon product and presented my two projects in several meeting with R&D and PEG groups.

EXPERIENCE

7/2023 – 5/2024
DOE Funded   **Machine Learning for Computational Chemistry**   **University of Central Florida**

- Pioneered **simulations** and **data analysis** demonstrating the superior effectiveness of non-metallic cations over metallic counterparts in the CO_2 reduction reaction. Findings published in a peer-reviewed journal.
- Developed an innovative **Machine Learning** model to predict CO_2 reduction to formate and CO using large, artificially generated datasets. Successfully extrapolated results to real electrochemical systems, directly securing **DOE** funding.
- Developed novel **numerical methods** and **algorithms** for CO_2 adsorption energy calculations, achieving higher precision in revealing cation effects

```
Python  /  C++  /  SQL  /  Bash                                    GitHub
```

10/2022 – 7/2023
scholarship holder   **Graph Neural Networks and Databases**   **University of Central Florida**

- Investigated how **Graph Convolutional Neural Networks** can improve the accuracy of retrieving deleted data. This facilitated collaboration between the Department of Statistics and Physics.
- Created a centralized **SQL database** by collecting and organizing existing group member data from the server. Enhanced accessibility and facilitated result validation among team members, promoting seamless collaboration and data-driven decision-making.
- **Developed two custom Python libraries** enhancing the ability to create models that accurately represent complex systems in material design and electrochemistry. Utilized them for predictive machine learning and **optimized research group's data science library**, enhancing it's speed and performance.

```
Julia  /  SQL  /  Bash                                             GitHub
```

8/2019 – 10/2022
NSF Funded   **Machine Learning for Computational Physics & Algorithm Design**   **University of Central Florida**

- Implemented **Deep Learning** and introduced a second-generation **neural network** potential to understand the behavior of **metals on semiconductors**, outpacing Density Functional Theory (DFT) in terms of speed and accuracy. This accomplishment played a pivotal role in securing **NSF funding.**
- **Developed** and **trained** a novel **Machine Learning Classifier** to predict **metal-semiconductor** interactions by modeling long-range charge transfer effects. The model significantly **accelerates computational efficiency**, addresses the shortcomings of previous methods, and **enhances** the **understanding of semiconductor** physics.
- **Developed** and **trained** a novel **Machine Learning Classifier** to predict **metal-semiconductor** interactions by modeling long-range charge transfer effects. The model significantly **accelerates computational efficiency**, addresses the shortcomings of previous methods, and **enhances** the **understanding of semiconductor** physics.

- Engineered state-of-the-art **numerical methods** and designed **cutting-edge algorithms** for chemical potential calculations of **metal-semiconductor junctions**, facilitating a collaboration with UC Davis.
- Taught **modeling** and applications of **Machine Learning** to simulation-generated datasets, emphasizing **feature engineering techniques**, including data cleaning and transformation, to improve the quality and relevance of the models.

```
Python  /  C++  /  SQL  /  Bash                              GitHub
```

10/2017 – 7/2019   **Machine Learning for Detection of Dark Mater**   **National and Kapodistrian University of Athens**
NKUA Funded
- Designed simulations and engaged in the development of a sophisticated **Machine Learning Approach** for Dark-Matter Particle Identification, navigating the challenges presented by extremely low temperatures with **precision and ingenuity.**
- Conducted Physics labs for undergraduates, immersing students in the intricacies of **statistical data analysis** and the art of data preparation for the application of **machine learning algorithms**.

```
Python  /  SQL  /  Bash                                      GitHub
```

TECHNICAL SKILLS

- Exemplary knowledge of **data structures**, consistently designing and implementing efficient and optimized solutions for complex data-related challenges.

- Master **data integration** techniques with SQL, loading, extracting, and transforming data to ensure seamless and efficient processes.

- Expertise in **algorithm design** and **data science software architecture** for streamlined data workflows.

- Proficient in **high-performance computing cluster management**, specializing in **Slurm** for job scheduling, resource allocation, and **performance optimization**.

- Demonstrated **Git** expertise, maintaining organized code repositories for collaborative, data-driven projects.

- Proficiently creates compelling data visualizations with **Tableau, Matplotlib, and gnuplot** for clear communication of complex insights.

MANAGEMENT SKILLS

- **Supervising and independently completing projects**, consistently meeting budget and deadline goals with top-tier execution.

- Proficient in **conceptualizing, planning, and executing** end-to-end data science initiative aimed at solving critical business challenges.

- Successful in leading **diverse teams**, **fostering collaboration** and energizing **collective success**.

- Exceptional **communication and presentation skills**, bridging knowledge gaps and **ensuring clarity**.

- Excelled in **problem solving** and **analytical thinking** in dynamic evolving environments.

- **Excels in both written and verbal communication**, proficiently acquires knowledge and imparts insights with clarity.
